How to use e-SAE data to understand your level 4 cohort

Using the e-SAE tableau dashboard you will be able to view programme data which shows patterns in the study skills confidence of your incoming level 4 cohort.

Why?

This is useful when considering the kinds of study support students will need during their transition to year 1. It may also be useful when considering assessment design decisions.

When?

The data for the incoming Year 1 cohort will be available on Tableau from September and will be updated weekly as more students complete the e-SAE.

How?

1. Go to [http://tableau.dmu.ac.uk](http://tableau.dmu.ac.uk)
2. Click on Workbooks
3. Scroll down through the alphabetically arranged workbooks to the e-Self Assessment Exercise 2015/16 (all data is in this area, not just 15/16).
5. Click on **Programme**

![](image)

6. Using the menus highlighted in red, select a programme and year. The profile is shown as a summary at the top, and then is broken down into greater details in the second box. Use the side scroll bar to see the response to all sections of the e-SAE

The profile shown here indicates that in this cohort verbal communication is a high confidence area but library and information skills requires some further development.

**What next?**

Now you have a clearer idea of the needs of your incoming cohort you could signpost your students towards the [Centre for Learning and Study Support](#) open programme of workshops. Alternatively contact us via the [staff enquiry form](#) to investigate how we can assist you to support students through the curriculum.
